

Volume 03 - Book 03.02 Enterprise Organization

Version v4 draft

README.md

Book 03.02 - Enterprise Organization

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-README

Purpose

Define the Enterprise Organization blueprint package and its subsystem decomposition.

Scope

Covers the Book 03.02 folder, organization architecture boundaries, and dependency on Enterprise Core services.

Responsibilities

- Define canonical organization architecture for Mariam-managed enterprises.
- Translate roadmap organization intent into subsystem boundaries.
- Provide implementation-ready structure for future specifications.

Inputs

- Volume 00 governance, enterprise, quality, and security principles.
- Volume 01 enterprise and remote work objectives.
- Volume 02 Enterprise Organization roadmap phase.
- Book 03.01 Enterprise Core identity, event, storage, and security boundaries.

Outputs

- Enterprise Organization blueprint boundaries.
- Organization subsystem contracts for later specifications.
- Traceable governance and accountability model.

Interfaces

- Book 03.01 Enterprise Core identity access interface.
- Book 03.01 event bus and storage interfaces.
- Future Volume 06 organization specifications.
- Future Volume 10 enterprise organization operating model.

Events

- OrganizationBlueprintDefined

- OrganizationBoundaryChanged
- OrganizationAcceptanceUpdated

Storage

- Markdown source files in the architecture library.
- Organization blueprint PDF artifact.
- Release manifest checksum records.

Security

- No private employee records, secrets, or confidential organization charts are stored in blueprint files.
- Role and approval rules are described as architecture until approved specifications define executable policy.
- Access to organization data must respect tenant, role, and audit boundaries.

Metrics

- Organization blueprint completeness.
- Traceability coverage to roadmap and constitution documents.
- Release artifact generation success.

Tests

- Validate required document sections.
- Verify generated PDF is readable.
- Verify v4 ZIP contains Book 03.02 Markdown and PDF.

Acceptance Criteria

- The document contains all required v4 sections.
- The document describes real organization behavior, not placeholder headings.
- The document is included in generated release artifacts.

Traceability

- MAL-V00-B005
- MAL-V00-B009
- MAL-V01-B006
- MAL-V02-B004
- MAL-V03-B03-01-009

Book 03.02 Index

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-INDEX

Purpose

List the canonical Enterprise Organization subsystem blueprint files.

Scope

Covers Book 03.02 documents from overview through organization roadmap.

Responsibilities

- Define canonical organization architecture for Mariam-managed enterprises.
- Translate roadmap organization intent into subsystem boundaries.
- Provide implementation-ready structure for future specifications.

Inputs

- Volume 00 governance, enterprise, quality, and security principles.
- Volume 01 enterprise and remote work objectives.
- Volume 02 Enterprise Organization roadmap phase.
- Book 03.01 Enterprise Core identity, event, storage, and security boundaries.

Outputs

- Enterprise Organization blueprint boundaries.
- Organization subsystem contracts for later specifications.
- Traceable governance and accountability model.

Interfaces

- Book 03.01 Enterprise Core identity access interface.
- Book 03.01 event bus and storage interfaces.
- Future Volume 06 organization specifications.
- Future Volume 10 enterprise organization operating model.

Events

- OrganizationBlueprintDefined
- OrganizationBoundaryChanged
- OrganizationAcceptanceUpdated

Storage

- Markdown source files in the architecture library.
- Organization blueprint PDF artifact.
- Release manifest checksum records.

Security

- No private employee records, secrets, or confidential organization charts are stored in blueprint files.
- Role and approval rules are described as architecture until approved specifications define executable policy.
- Access to organization data must respect tenant, role, and audit boundaries.

Metrics

- Organization blueprint completeness.
- Traceability coverage to roadmap and constitution documents.
- Release artifact generation success.

Tests

- Validate required document sections.
- Verify generated PDF is readable.
- Verify v4 ZIP contains Book 03.02 Markdown and PDF.

Acceptance Criteria

- The document contains all required v4 sections.
- The document describes real organization behavior, not placeholder headings.
- The document is included in generated release artifacts.

Traceability

Book 03.02.01 - Enterprise Organization Overview

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-001

Purpose

Define Enterprise Organization as the blueprint layer that models boards, chief office, departments, roles, decision flow, approvals, KPIs, and operating rhythm.

Scope

Covers the complete organization subsystem boundary and its dependency on Enterprise Core identity, storage, security, events, and observability.

Responsibilities

- Define the canonical organization model.
- Separate organization architecture from domain-specific team habits.
- Establish accountability, authority, and coordination primitives.

Inputs

- Enterprise structure requirements.
- Role and department vocabulary.
- Governance principles.
- Identity and access context.

Outputs

- Organization subsystem map.
- Canonical organization objects.
- Blueprint boundaries for decision and approval flows.

Interfaces

- Identity access.
- Object manager.
- Event bus.
- Governance checkpoint interface.

Events

- EnterpriseOrganizationInitialized
- OrganizationModelChanged
- OrganizationBlueprintReviewed

Storage

- Organization model registry.
- Department catalog.
- Role catalog.
- Decision flow references.

Security

- Organization data is tenant-scoped.
- Role visibility follows least privilege.
- Governance changes are auditable.

Metrics

- Organization model coverage.
- Undefined role count.
- Decision traceability coverage.

Tests

- Organization model completeness tests.
- Role boundary tests.
- Traceability tests.

Acceptance Criteria

- All major organization subsystems are named and scoped.
- Organization objects can be traced to Enterprise Core primitives.
- Future specifications can implement organization workflows from this blueprint.

Traceability

- MAL-V00-B005
- MAL-V01-B002
- MAL-V02-B004

Book 03.02.02 - Enterprise Structure

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-002

Purpose

Define the structural model for enterprises, business units, departments, teams, programs, and operating groups.

Scope

Covers hierarchy, matrix relationships, ownership, membership, and structural lifecycle.

Responsibilities

- Represent formal and project-based organization units.
- Support hierarchy and matrix membership.
- Track unit owners and accountable leads.
- Preserve structural history.

Inputs

- Tenant organization record.
- Unit creation request.
- Membership assignments.
- Ownership policy.

Outputs

- Enterprise structure graph.
- Unit records.
- Membership records.
- Structure change events.

Interfaces

- Object manager.
- Identity access.
- Organization storage.
- Event bus.

Events

- OrganizationUnitCreated
- OrganizationUnitUpdated

- MembershipAssigned
- StructureArchived

Storage

- Organization unit store.
- Membership ledger.
- Structure version history.

Security

- Only authorized organization administrators mutate structure.
- Membership reads are scoped by role and tenant.
- Archived structures retain audit metadata.

Metrics

- Unit count.
- Orphan unit count.
- Membership change rate.
- Structure update latency.

Tests

- Hierarchy validation tests.
- Matrix membership tests.
- Unauthorized mutation tests.
- Archive and history tests.

Acceptance Criteria

- Enterprises can model hierarchy and matrix structures.
- Every active unit has an owner or documented exception.
- Structure changes are traceable.

Traceability

- MAL-V02-B004
- MAL-V03-B03-01-012
- MAL-V03-B03-01-009

Book 03.02.03 - Board Governance

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-003

Purpose

Define board-level governance entities, review responsibilities, decision rights, and oversight records.

Scope

Covers boards, committees, mandates, agendas, resolutions, review gates, and executive oversight.

Responsibilities

- Represent boards and committees.
- Define mandate and decision rights.
- Record governance resolutions.
- Provide oversight checkpoints for enterprise strategy and risk.

Inputs

- Board charter.
- Committee mandate.
- Agenda item.
- Resolution proposal.
- Risk and compliance inputs.

Outputs

- Board records.
- Resolution records.
- Oversight decisions.
- Governance action items.

Interfaces

- Governance checkpoint interface.
- Decision flow.
- Approval lines.
- Event bus.

Events

- BoardCreated

- BoardResolutionPassed
- GovernanceReviewScheduled
- BoardActionAssigned

Storage

- Board charter store.
- Resolution archive.
- Governance action ledger.

Security

- Board records may be restricted to privileged roles.
- Resolution changes are immutable after approval unless superseded.
- Sensitive agenda content is classified.

Metrics

- Resolution cycle time.
- Open board action count.
- Governance review completion.
- Mandate coverage.

Tests

- Mandate validation tests.
- Resolution immutability tests.
- Access restriction tests.
- Action tracking tests.

Acceptance Criteria

- Board mandates are explicit.
- Board decisions create traceable records.
- Governance actions have owners and due dates.

Traceability

- MAL-V00-B009
- MAL-V02-B016
- MAL-V03-B03-02-08

Book 03.02.04 - Chief Office

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-004

Purpose

Define the Chief Office as the executive coordination layer for cross-enterprise direction and accountability.

Scope

Covers chief roles, executive mandates, operating reviews, delegation, and coordination with boards and departments.

Responsibilities

- Coordinate enterprise priorities.
- Translate board direction into operating mandates.
- Own executive decision forums.
- Delegate accountable missions to departments.

Inputs

- Board decisions.
- Enterprise KPIs.
- Department reports.
- Strategic objectives.
- Escalation requests.

Outputs

- Executive mandates.
- Chief office decisions.
- Delegated missions.
- Operating review outcomes.

Interfaces

- Board governance.
- Department missions.
- Decision flow.
- Enterprise KPIs.

Events

- ChiefMandateIssued

- ExecutiveReviewCompleted
- MissionDelegated
- ChiefDecisionRecorded

Storage

- Chief office mandate ledger.
- Executive decision records.
- Operating review archive.

Security

- Chief office actions require executive authority.
- Delegated mandates retain origin and approval trace.
- Sensitive executive decisions are classified.

Metrics

- Mandate completion rate.
- Executive decision cycle time.
- Escalation resolution time.

Tests

- Delegation trace tests.
- Executive authority tests.
- Mandate lifecycle tests.

Acceptance Criteria

- Chief office decisions are traceable to board or strategy sources.
- Delegated missions have owners.
- Operating reviews produce follow-up records.

Traceability

- MAL-V01-B002
- MAL-V02-B004

Book 03.02.05 - Departments

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-005

Purpose

Define department architecture for stable enterprise functions and accountable operating units.

Scope

Covers department identity, lifecycle, ownership, operating scope, staffing, and cross-department relationships.

Responsibilities

- Create canonical department records.
- Assign department owners and operating scope.
- Track department lifecycle.
- Represent dependencies between departments.

Inputs

- Department creation request.
- Department owner assignment.
- Operating scope definition.
- Staffing and role inputs.

Outputs

- Department catalog.
- Department ownership records.
- Department lifecycle events.
- Dependency map.

Interfaces

- Enterprise structure.
- Department missions.
- Roles responsibilities.
- Organization storage.

Events

- DepartmentCreated
- DepartmentOwnerAssigned

- DepartmentScopeChanged
- DepartmentArchived

Storage

- Department catalog store.
- Department dependency index.
- Ownership history.

Security

- Department changes require organization authority.
- Department visibility respects tenant policies.
- Archived departments remain available for audit.

Metrics

- Department count.
- Unowned department count.
- Scope change frequency.
- Dependency density.

Tests

- Department lifecycle tests.
- Owner authorization tests.
- Dependency mapping tests.

Acceptance Criteria

- Every active department has an owner and scope.
- Department relationships are visible.
- Department lifecycle changes are auditable.

Traceability

- MAL-V00-B005
- MAL-V02-B004

Book 03.02.06 - Department Missions

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-006

Purpose

Define how missions are assigned, tracked, reviewed, and evolved for departments.

Scope

Covers mission statements, strategic outcomes, operating commitments, dependencies, and review cadence.

Responsibilities

- Attach missions to departments.
- Translate enterprise objectives into department commitments.
- Track mission dependencies and progress.
- Support mission review and revision.

Inputs

- Enterprise objectives.
- Chief office mandates.
- Department scope.
- KPI targets.
- Dependency inputs.

Outputs

- Department mission records.
- Mission dependency map.
- Mission review outcomes.
- Mission change events.

Interfaces

- Chief office.
- Enterprise KPIs.
- Operating rhythm.
- Workflow system.

Events

- DepartmentMissionAssigned

- MissionProgressReported
- MissionRevised
- MissionRetired

Storage

- Mission store.
- Mission review history.
- Mission dependency records.

Security

- Mission edits require owner or delegated authority.
- Sensitive mission data is classified.
- Mission retirement preserves history.

Metrics

- Mission coverage by department.
- Mission progress reporting rate.
- Mission revision frequency.

Tests

- Mission assignment tests.
- Authority tests.
- Dependency consistency tests.
- Mission review tests.

Acceptance Criteria

- Every department can declare one or more missions.
- Missions trace to objectives or executive mandates.
- Mission changes are reviewable.

Traceability

- MAL-V01-B002
- MAL-V02-B004
- MAL-V03-B03-02-04

Book 03.02.07 - Roles Responsibilities

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-007

Purpose

Define enterprise roles, responsibilities, authority scopes, and accountability expectations.

Scope

Covers role taxonomy, responsibility assignments, role lifecycle, authority boundaries, and conflict handling.

Responsibilities

- Maintain a role catalog.
- Attach responsibilities to roles.
- Define authority and accountability boundaries.
- Support role assignment and revocation.

Inputs

- Role definition.
- Responsibility statement.
- Authority policy.
- Department and team context.
- User identity.

Outputs

- Role catalog entries.
- Responsibility assignments.
- Authority scope records.
- Role change events.

Interfaces

- Identity access.
- Approval lines.
- Department catalog.
- Security policy.

Events

- RoleCreated

- ResponsibilityAssigned
- RoleBoundToUser
- RoleRevoked

Storage

- Role catalog store.
- Responsibility matrix.
- Role binding ledger.

Security

- Role bindings follow least privilege.
- Privileged roles require audit.
- Conflicting responsibilities require review.

Metrics

- Role coverage.
- Unassigned responsibility count.
- Privileged role count.
- Role change rate.

Tests

- Role binding tests.
- Responsibility matrix tests.
- Privilege escalation tests.
- Conflict detection tests.

Acceptance Criteria

- Roles have clear responsibilities and authority.
- Privileged roles are auditable.
- Responsibilities can be traced to departments or missions.

Traceability

- MAL-V00-B005
- MAL-V00-B011

Book 03.02.08 - Decision Flow

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-008

Purpose

Define how decisions move through enterprise roles, departments, chief office, and board governance.

Scope

Covers decision proposals, routing, review, authority checks, outcomes, and decision records.

Responsibilities

- Represent decision requests.
- Route decisions to accountable authorities.
- Record decision rationale and outcomes.
- Connect decisions to approvals and escalations.

Inputs

- Decision proposal.
- Decision context.
- Authority matrix.
- Impact and risk classification.
- Supporting evidence.

Outputs

- Decision route.
- Decision record.
- Decision outcome event.
- Follow-up actions.

Interfaces

- Approval lines.
- Escalation model.
- Board governance.
- Event bus.

Events

- DecisionProposed

- DecisionRouted
- DecisionApproved
- DecisionRejected
- DecisionDeferred

Storage

- Decision record store.
- Rationale archive.
- Decision route history.

Security

- Decision visibility follows classification.
- Decision authority is checked before approval.
- High-impact decisions require audit.

Metrics

- Decision cycle time.
- Deferred decision count.
- Authority mismatch count.
- Decision trace completeness.

Tests

- Decision routing tests.
- Authority validation tests.
- Decision record immutability tests.

Acceptance Criteria

- Decisions have owners, routes, rationale, and outcomes.
- Authority mismatches are rejected or escalated.
- Decision records are traceable.

Traceability

- MAL-V00-B009
- MAL-V02-B004

Book 03.02.09 - Escalation Model

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-009

Purpose

Define escalation paths for blocked work, risk events, conflicts, missed targets, and authority gaps.

Scope

Covers escalation triggers, levels, recipients, timers, resolution states, and audit evidence.

Responsibilities

- Classify escalation triggers.
- Route escalations to accountable roles.
- Track escalation state and resolution.
- Preserve conflict and risk evidence.

Inputs

- Escalation request.
- Trigger classification.
- Current owner.
- Impacted mission or decision.
- Time sensitivity.

Outputs

- Escalation ticket.
- Escalation route.
- Resolution record.
- Escalation event stream.

Interfaces

- Decision flow.
- Approval lines.
- Chief office.
- Enterprise KPIs.

Events

- EscalationRaised

- EscalationAssigned
- EscalationResolved
- EscalationBreached

Storage

- Escalation ledger.
- Resolution history.
- Escalation SLA metadata.

Security

- Escalations may contain sensitive conflict or risk data.
- Access follows role and case assignment.
- Resolution edits are auditable.

Metrics

- Escalation volume.
- Resolution time.
- Breach count.
- Repeat escalation rate.

Tests

- Trigger classification tests.
- Routing tests.
- Breach timer tests.
- Access control tests.

Acceptance Criteria

- Escalations have triggers, owners, timers, and outcomes.
- Breaches are visible.
- Resolved escalations preserve evidence.

Traceability

- MAL-V00-B009
- MAL-V01-B006

Book 03.02.10 - Approval Lines

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-010

Purpose

Define approval line architecture for policies, decisions, budgets, changes, releases, and protected actions.

Scope

Covers approval chains, thresholds, delegated authority, rejection, expiration, and audit.

Responsibilities

- Define approval chains.
- Validate approver authority.
- Track approval state.
- Support delegation and expiration.

Inputs

- Approval request.
- Policy threshold.
- Approver role.
- Delegation record.
- Decision or workflow context.

Outputs

- Approval route.
- Approval decision.
- Rejection reason.
- Approval audit event.

Interfaces

- Identity access.
- Decision flow.
- Governance checkpoints.
- Workflow system.

Events

- ApprovalRequested

- ApprovalGranted
- ApprovalRejected
- ApprovalExpired
- ApprovalDelegated

Storage

- Approval ledger.
- Delegation records.
- Approval policy versions.

Security

- Approvals require authenticated and authorized approvers.
- Delegation has scope and expiration.
- Approval history is tamper-resistant.

Metrics

- Approval cycle time.
- Expired approval count.
- Delegation usage.
- Unauthorized approval attempts.

Tests

- Approval routing tests.
- Delegation tests.
- Threshold tests.
- Unauthorized approval tests.

Acceptance Criteria

- Approval lines enforce authority.
- Approvals produce auditable records.
- Delegations are bounded and reviewable.

Traceability

Book 03.02.11 - Cross Department Coordination

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-011

Purpose

Define coordination patterns between departments for shared missions, handoffs, dependencies, and joint reviews.

Scope

Covers coordination groups, cross-functional missions, handoff protocols, dependency tracking, and shared accountability.

Responsibilities

- Create coordination structures.
- Track cross-department dependencies.
- Define handoff responsibilities.
- Support joint operating reviews.

Inputs

- Department missions.
- Dependency request.
- Handoff context.
- Shared KPI target.
- Coordination charter.

Outputs

- Coordination record.
- Dependency map.
- Handoff record.
- Joint review outcome.

Interfaces

- Department missions.
- Operating rhythm.
- Workflow system.
- Knowledge system.

Events

- CoordinationGroupCreated

- DependencyLogged
- HandoffAccepted
- JointReviewCompleted

Storage

- Coordination group store.
- Dependency ledger.
- Handoff history.

Security

- Shared records respect participating department permissions.
- Sensitive dependencies are classified.
- Handoff acceptance is auditable.

Metrics

- Dependency resolution time.
- Handoff acceptance rate.
- Joint review completion.
- Cross-department blocker count.

Tests

- Coordination group tests.
- Dependency lifecycle tests.
- Handoff authorization tests.
- Joint review tests.

Acceptance Criteria

- Cross-department work has owners and handoffs.
- Dependencies are visible.
- Joint reviews create actionable outcomes.

Traceability

Book 03.02.12 - Enterprise KPIs

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-012

Purpose

Define enterprise KPI architecture across boards, chief office, departments, missions, and operating reviews.

Scope

Covers KPI definitions, ownership, targets, measurement sources, review cadence, and interpretation.

Responsibilities

- Maintain KPI catalog.
- Attach KPIs to owners and missions.
- Define measurement source and cadence.
- Support executive and department review.

Inputs

- KPI definition.
- Measurement source.
- Target value.
- Owner role.
- Mission or objective link.

Outputs

- KPI catalog records.
- KPI measurement snapshots.
- Target status.
- Review actions.

Interfaces

- Chief office.
- Department missions.
- Operating rhythm.
- Observability metrics.

Events

- KpiDefined

- KpiMeasured
- KpiTargetChanged
- KpiReviewActionCreated

Storage

- KPI catalog store.
- Measurement history.
- Target revision history.

Security

- KPI visibility follows business sensitivity.
- Measurement sources require provenance.
- Manipulated or disputed metrics are flagged.

Metrics

- KPI coverage.
- Measurement freshness.
- Target miss rate.
- Disputed KPI count.

Tests

- KPI definition tests.
- Measurement freshness tests.
- Ownership tests.
- Access control tests.

Acceptance Criteria

- KPIs have owners, sources, cadence, and targets.
- KPI status can drive operating reviews.
- KPI changes are traceable.

Traceability

- MAL-V01-B002
- MAL-V02-B004

Book 03.02.13 - Operating Rhythm

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-013

Purpose

Define the cadence of enterprise operations: reviews, planning cycles, retrospectives, board sessions, and execution checkpoints.

Scope

Covers recurring meetings, async updates, review packs, decision windows, and rhythm-driven accountability.

Responsibilities

- Define operating cadences.
- Schedule reviews and checkpoints.
- Collect review inputs.
- Convert review outcomes into actions.

Inputs

- KPI status.
- Department reports.
- Escalations.
- Decision backlog.
- Board and chief office calendars.

Outputs

- Operating calendar.
- Review packet.
- Action register.
- Rhythm completion events.

Interfaces

- Enterprise KPIs.
- Chief office.
- Board governance.
- Remote work automation.

Events

- OperatingReviewScheduled

- ReviewPacketSubmitted
- OperatingReviewCompleted
- ActionRegistered

Storage

- Operating calendar store.
- Review packet archive.
- Action register.

Security

- Review packets may contain sensitive enterprise data.
- Access follows review membership and role.
- Action records retain accountability.

Metrics

- Review completion rate.
- Packet freshness.
- Action closure rate.
- Missed cadence count.

Tests

- Cadence scheduling tests.
- Review packet access tests.
- Action lifecycle tests.

Acceptance Criteria

- Operating rhythm is explicit and repeatable.
- Reviews produce owned actions.
- Cadence records can be audited.

Traceability

- MAL-V01-B006
- MAL-V02-B004
- MAL-V02-B015

Book 03.02.14 - Governance Checkpoints

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-014

Purpose

Define governance checkpoints embedded across organization decisions, approvals, missions, and reviews.

Scope

Covers checkpoint triggers, required evidence, review authority, exception handling, and status outcomes.

Responsibilities

- Create governance checkpoints.
- Require evidence for high-impact actions.
- Track checkpoint status.
- Route exceptions for review.

Inputs

- Decision or approval context.
- Risk classification.
- Required evidence.
- Policy references.
- Reviewer assignment.

Outputs

- Checkpoint record.
- Checkpoint outcome.
- Exception request.
- Evidence package.

Interfaces

- Decision flow.
- Approval lines.
- Enterprise governance.
- Audit events.

Events

- GovernanceCheckpointOpened

- EvidenceSubmitted
- CheckpointPassed
- CheckpointFailed
- ExceptionRequested

Storage

- Checkpoint ledger.
- Evidence metadata.
- Exception history.

Security

- Evidence access is restricted by classification.
- Checkpoint bypass requires explicit exception.
- Governance outcomes are auditable.

Metrics

- Checkpoint pass rate.
- Missing evidence count.
- Exception rate.
- Checkpoint cycle time.

Tests

- Checkpoint trigger tests.
- Evidence requirement tests.
- Exception workflow tests.
- Access tests.

Acceptance Criteria

- High-impact organization actions pass checkpoints.
- Evidence requirements are visible.
- Exceptions are bounded and reviewable.

Book 03.02.15 - Organization Events

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-015

Purpose

Define the canonical event taxonomy for Enterprise Organization subsystems.

Scope

Covers organization event names, envelopes, severity, correlation, retention, and audit expectations.

Responsibilities

- Standardize organization event names.
- Define required event metadata.
- Classify organization event sensitivity.
- Support traceability across decisions, approvals, roles, and departments.

Inputs

- Organization subsystem events.
- Event bus envelope standard.
- Security classification.
- Audit requirements.

Outputs

- Organization event catalog.
- Event retention guidance.
- Correlation rules.
- Event schema references.

Interfaces

- Event bus.
- Core events.
- Audit log.
- Observability.

Events

- OrganizationEventDefined
- OrganizationEventEmitted

- OrganizationEventRejected
- OrganizationEventDeprecated

Storage

- Organization event catalog.
- Event schema history.
- Event retention metadata.

Security

- Event payloads are classified.
- Protected topics require authorization.
- Sensitive organization events avoid unnecessary personal data.

Metrics

- Event schema coverage.
- Malformed event count.
- Correlation coverage.
- Protected topic denial count.

Tests

- Event schema tests.
- Correlation propagation tests.
- Topic authorization tests.
- Deprecated event tests.

Acceptance Criteria

- Organization events follow canonical envelope rules.
- Sensitive events are protected.
- Events support governance and audit traceability.

Traceability

- MAL-V03-B03-01-006
- MAL-V03-B03-01-014

Book 03.02.16 - Organization Storage

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-016

Purpose

Define logical storage for organization structures, departments, roles, missions, decisions, approvals, KPIs, and operating rhythm records.

Scope

Covers store boundaries, record ownership, retention, indexing, history, and backup expectations.

Responsibilities

- Define logical organization stores.
- Preserve history for governance records.
- Support lookup and reporting.
- Align retention with sensitivity and audit requirements.

Inputs

- Organization objects.
- Decision records.
- Approval ledgers.
- KPI measurements.
- Retention policy.

Outputs

- Organization storage map.
- Record retention rules.
- Index requirements.
- Backup expectations.

Interfaces

- Object manager.
- Core storage.
- Identity access.
- Observability.

Events

- OrganizationRecordStored

- OrganizationRecordArchived
- OrganizationRecordReadDenied
- OrganizationStorageRecovered

Storage

- Organization unit store.
- Role and responsibility store.
- Decision and approval ledger.
- KPI measurement history.

Security

- Tenant isolation is mandatory.
- Protected records enforce role-based reads.
- Backups preserve security classification.

Metrics

- Storage write latency.
- Read denial count.
- Record freshness.
- Backup success rate.

Tests

- Storage schema tests.
- Tenant isolation tests.
- Retention tests.
- Backup restore tests.

Acceptance Criteria

- Organization storage supports all Book 03.02 records.
- Protected data is access-controlled.
- Retention and history are explicit.

Traceability

- MAL-V03-B03-01-015
- MAL-V00-B011

Book 03.02.17 - Organization Security

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-017

Purpose

Define security controls for organization data, roles, approvals, decisions, KPIs, and governance records.

Scope

Covers least privilege, tenant isolation, role visibility, audit, sensitive records, and administrative authority.

Responsibilities

- Enforce least privilege across organization subsystems.
- Classify sensitive organization records.
- Audit protected organization changes.
- Prevent unauthorized approval or role escalation.

Inputs

- Identity context.
- Role binding.
- Record classification.
- Approval authority.
- Governance policy.

Outputs

- Security control baseline.
- Protected action catalog.
- Audit requirements.
- Access denial events.

Interfaces

- Identity access.
- Core security.
- Approval lines.
- Organization storage.

Events

- OrganizationProtectedActionRequested

- OrganizationAccessDenied
- RoleEscalationBlocked
- OrganizationPolicyChanged

Storage

- Protected action catalog.
- Organization access audit log.
- Policy version records.

Security

- Deny by default for protected organization actions.
- Privileged role changes require audit.
- Sensitive organization records are classified.

Metrics

- Access denial count.
- Privileged change count.
- Policy change count.
- Security test pass rate.

Tests

- Least privilege tests.
- Role escalation tests.
- Protected action tests.
- Sensitive record access tests.

Acceptance Criteria

- Protected organization actions require authorization.
- Role escalation is controlled.
- Sensitive records remain tenant-scoped and auditable.

Book 03.02.18 - Organization Testing

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-018

Purpose

Define the testing blueprint for Enterprise Organization subsystems.

Scope

Covers model validation, role tests, decision routing, approval chains, escalation, KPIs, security, storage, and acceptance tests.

Responsibilities

- Define organization test layers.
- Map organization risks to test scenarios.
- Prepare acceptance tests for later implementation.
- Verify traceability to roadmap and core services.

Inputs

- Organization blueprints.
- Security controls.
- Decision and approval flows.
- KPI definitions.
- Storage requirements.

Outputs

- Organization test matrix.
- Acceptance scenarios.
- Security test requirements.
- Regression checklist.

Interfaces

- Testing guide.
- Core testing.
- CI runner.
- Organization storage fixtures.

Events

- OrganizationTestPlanCreated

- OrganizationTestStarted
- OrganizationTestFailed
- OrganizationAcceptancePassed

Storage

- Test result records.
- Coverage reports.
- Failure evidence.
- Acceptance signoff.

Security

- Tests must avoid real employee or confidential board data.
- Fixtures must isolate tenants.
- Privileged scenarios must be explicit.

Metrics

- Test coverage by subsystem.
- Security test pass rate.
- Flaky organization test count.
- Defect escape rate.

Tests

- Structure tests.
- Role and authority tests.
- Decision routing tests.
- Approval line tests.
- Storage and security tests.

Acceptance Criteria

- Each organization subsystem has test expectations.
- High-risk governance flows have acceptance tests.
- Security and tenant isolation are tested.

Book 03.02.19 - Organization Acceptance

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-019

Purpose

Define acceptance gates for the Enterprise Organization blueprint and future implementation.

Scope

Covers document completeness, subsystem coverage, authority, governance, storage, security, testing, and release evidence.

Responsibilities

- Define acceptance criteria for organization design.
- Aggregate subsystem readiness into a review model.
- Identify gaps that block implementation readiness.
- Connect release artifacts to blueprint acceptance.

Inputs

- Subsystem documents.
- Traceability records.
- Testing blueprint.
- Security controls.
- Release manifest.

Outputs

- Organization acceptance checklist.
- Gap register.
- Readiness decision.
- Release evidence references.

Interfaces

- Volume 03 acceptance.
- Book 03.02 index.
- Manifest and release notes.
- Future specifications.

Events

- OrganizationAcceptanceReviewStarted

- OrganizationAcceptanceGapFound
- OrganizationAcceptanceApproved
- OrganizationAcceptanceRejected

Storage

- Acceptance checklist.
- Gap register.
- Review notes.
- Release evidence records.

Security

- Security gaps block acceptance.
- Acceptance records do not include secrets.
- Review authority is explicit.

Metrics

- Checklist completion.
- Critical gap count.
- Traceability coverage.
- Security gate pass rate.

Tests

- Required section validation.
- Traceability validation.
- ZIP inclusion validation.
- PDF readability validation.

Acceptance Criteria

- All Book 03.02 files exist.
- Required sections are present.
- PDF and ZIP artifacts include Book 03.02.
- Critical organization risks are recorded or resolved.

Traceability

- MAL-V00-B014
- MAL-V02-B004
- MAL-V03-ACCEPTANCE

Book 03.02.20 - Organization Roadmap

Version: v4 draft

Status: Draft

Document ID: MAL-V03-B03-02-020

Purpose

Define the implementation-facing roadmap for moving Enterprise Organization from blueprint to specifications and code.

Scope

Covers sequencing, specification priorities, integration with Enterprise Core, rollout risks, and future Volume 10 expansion.

Responsibilities

- Translate organization blueprint into specification order.
- Identify implementation gates.
- Sequence structure, roles, decisions, approvals, KPIs, and rhythm.
- Preserve alignment with Enterprise Core and roadmap phase 02.

Inputs

- Book 03.02 blueprint documents.
- Enterprise Core interfaces.
- Master Roadmap phase 02.
- Governance and testing requirements.

Outputs

- Organization specification backlog.
- Implementation sequence proposal.
- Dependency map.
- Readiness gates.

Interfaces

- Volume 06 specification queue.
- Volume 10 enterprise organization.
- System repository issue planning.
- Testing guide.

Events

- OrganizationRoadmapUpdated

- OrganizationSpecificationQueued
- OrganizationImplementationGateOpened
- OrganizationImplementationGateBlocked

Storage

- Roadmap decision records.
- Specification backlog.
- Implementation gate evidence.

Security

- Implementation must not bypass identity, security, or storage specifications.
- Roadmap records avoid confidential organization data.
- Code work remains traceable to document IDs.

Metrics

- Specification readiness count.
- Blocked dependency count.
- Implementation gate completion.
- Roadmap change frequency.

Tests

- Roadmap consistency tests.
- Dependency completeness review.
- Traceability review.
- Implementation readiness checklist.

Acceptance Criteria

- The roadmap identifies specification order.
- Implementation gates are traceable.
- Organization work does not outrun core security and identity foundations.

Traceability

- MAL-V02-B004
- MAL-V03-B03-01-009
- MAL-V03-B03-02-019
