

Volume 02 - Master Roadmap

Version v2 draft

README.md

Volume 02 - Master Roadmap

Version: v2 draft

Status: Draft

Document ID: MAL-V02-README

Purpose

Volume 02 defines the execution roadmap for Mariam AI Enterprise OS from documentation foundation through autonomous enterprise maturity.

Scope

This volume covers strategic phases, sequencing, dependencies, risks, and acceptance expectations. It does not implement system code.

Principles

- Roadmap phases must be traceable to the Enterprise Constitution and Master Vision.
- Foundational governance, security, knowledge, and runtime systems come before broad autonomy.
- Each phase should produce verifiable documents, specifications, or implementation-ready plans.

Operating Rules

- Do not treat later-phase autonomy as approved implementation before its dependencies exist.
- Use phase books to decide what specifications and blueprints must be written next.
- Update roadmap status through changelog entries and release notes.

Acceptance Criteria

- All 21 implementation phases and the roadmap overview are present.
- Each phase includes systems, deliverables, dependencies, risks, acceptance criteria, notes, and traceability.
- Generated release artifacts include a Volume 02 PDF and v2 ZIP.

Version History

Version	Date	Status	Notes
v2 draft	2026-06-29	Draft	Initial complete roadmap volume for v2.

Volume 02 Index

Version: v2 draft

Status: Draft

Document ID: MAL-V02-INDEX

Purpose

Define the canonical order and IDs of the Master Roadmap documents.

Scope

This index covers Volume 02 roadmap documents only.

Principles

- Roadmap references must use stable document IDs.
- Phase order communicates dependency intent.
- Reserved or future changes must not break existing references casually.

Operating Rules

- Add new phases only when the roadmap structure changes materially.
- Keep phase numbering stable after release.
- Update this index before every roadmap release.

Acceptance Criteria

- Every Volume 02 book is listed.
- Every listed file exists.
- The index matches the release ZIP contents.

Roadmap Books

- MAL-V02-B001 - book-02-01-roadmap-overview.md
- MAL-V02-B002 - book-02-02-phase-00-foundation-constitution.md
- MAL-V02-B003 - book-02-03-phase-01-enterprise-core.md
- MAL-V02-B004 - book-02-04-phase-02-enterprise-organization.md
- MAL-V02-B005 - book-02-05-phase-03-ai-society.md
- MAL-V02-B006 - book-02-06-phase-04-knowledge-system.md
- MAL-V02-B007 - book-02-07-phase-05-capability-system.md
- MAL-V02-B008 - book-02-08-phase-06-dna-operating-system.md
- MAL-V02-B009 - book-02-09-phase-07-runtime-ecosystem.md
- MAL-V02-B010 - book-02-10-phase-08-model-ecosystem.md
- MAL-V02-B011 - book-02-11-phase-09-workflow-system.md

- MAL-V02-B012 - book-02-12-phase-10-swarm-intelligence.md
- MAL-V02-B013 - book-02-13-phase-11-opportunity-intelligence.md
- MAL-V02-B014 - book-02-14-phase-12-freelance-automation.md
- MAL-V02-B015 - book-02-15-phase-13-remote-work-automation.md
- MAL-V02-B016 - book-02-16-phase-14-enterprise-governance.md
- MAL-V02-B017 - book-02-17-phase-15-enterprise-services.md
- MAL-V02-B018 - book-02-18-phase-16-infrastructure.md
- MAL-V02-B019 - book-02-19-phase-17-experience-layer.md
- MAL-V02-B020 - book-02-20-phase-18-marketplace.md
- MAL-V02-B021 - book-02-21-phase-19-evolution-system.md
- MAL-V02-B022 - book-02-22-phase-20-autonomous-enterprise.md

Version History

Version	Date	Status	Notes
v2 draft	2026-06-29	Draft	Initial roadmap index.

Volume 02 Changelog

Version: v2 draft

Status: Draft

Document ID: MAL-V02-CHANGELOG

Purpose

Record material changes to the Master Roadmap.

Scope

This changelog covers roadmap phase additions, sequencing changes, dependency changes, and release status.

Principles

- Roadmap change history must be auditable.
- Sequencing changes must explain their strategic reason.
- Draft roadmap changes are still recorded.

Operating Rules

- Add an entry for every release.
- Identify affected phases when roadmap direction changes.
- Keep old entries intact.

Acceptance Criteria

- The current release is recorded.
- The entry states what was added in v2.
- Downstream documents can use this changelog to understand roadmap evolution.

Entries

Date	Version	Status	Summary
2026-06-29	v2 draft	Draft	Added the complete Master Roadmap volume with overview and phases 00 through 20.

Version History

Version	Date	Status	Notes
v2 draft	2026-06-29	Draft	Initial roadmap changelog.

Volume 02 Traceability

Version: v2 draft

Status: Draft

Document ID: MAL-V02-TRACEABILITY

Purpose

Connect roadmap phases to constitutional and strategic authority.

Scope

This document covers traceability from Volume 02 to Volume 00 and Volume 01.

Principles

- Every phase must cite governing documents.
- Traceability must expose sequencing logic.
- A roadmap item without traceability remains provisional.

Operating Rules

- Use document IDs in all phase books.
- Add downstream blueprint, specification, and testing IDs as later volumes mature.
- Review trace gaps before release packaging.

Acceptance Criteria

- Every phase book has a traceability section.
- Major roadmap themes map to constitutional and strategic books.
- Future implementation work can cite phase IDs.

Trace Map

Roadmap Area	Primary Sources
Foundation and governance	MAL-V00-B001, MAL-V00-B009, MAL-V00-B014
Enterprise platform core	MAL-V00-B005, MAL-V00-B011, MAL-V01-B002
AI, model, and swarm systems	MAL-V00-B006, MAL-V00-B008, MAL-V01-B003
Knowledge and DNA systems	MAL-V00-B007, MAL-V01-B008, MAL-V01-B009
Freelance, remote, and marketplace ecosystems	MAL-V01-B005, MAL-V01-B006, MAL-V01-B007
Evolution and autonomy	MAL-V00-B013, MAL-V00-B015, MAL-V01-B010

Version History

Version	Date	Status	Notes
v2 draft	2026-06-29	Draft	Initial roadmap traceability map.

Volume 02 Acceptance

Version: v2 draft

Status: Draft

Document ID: MAL-V02-ACCEPTANCE

Purpose

Define when the Master Roadmap is acceptable as a v2 draft baseline.

Scope

This acceptance document covers completeness, structure, traceability, generated artifacts, and build verification.

Principles

- A roadmap is useful only when it can guide sequencing decisions.
- Acceptance requires dependencies and risks, not just aspirational phase names.
- Generated artifacts must prove the roadmap can be released.

Operating Rules

- Every phase book must include the required v2 sections.
- Roadmap overview must explain the sequencing model.
- Build verification must include the Volume 02 PDF and v2 ZIP.

Acceptance Criteria

- Volume 02 contains README, INDEX, CHANGELOG, TRACEABILITY, ACCEPTANCE, overview, and 21 phase books.
- Each phase includes strategic objective, systems, deliverables, dependencies, risks, acceptance, implementation notes, and traceability.
- v2 release artifacts include Volume_02_Master_Roadmap_v2_draft.pdf, Mariam_Architecture_Library_v2_draft.zip, MANIFEST.json, and release notes.

Version History

Version	Date	Status	Notes
v2 draft	2026-06-29	Draft	Initial roadmap acceptance rules.

Book 02-01 - Roadmap Overview

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B001

Purpose

Define the complete execution arc for Mariam AI Enterprise OS from documentation authority to autonomous enterprise maturity.

Scope

Covers phase sequencing, dependency philosophy, release progression, and how roadmap phases should feed later blueprints and specifications.

Strategic Objective

Create a practical roadmap that can guide documentation, architecture, implementation, testing, and operations without requiring immediate system code changes.

Systems Included

- Phase sequencing model
- Dependency chain
- Release planning frame
- Traceability model
- Roadmap governance

Main Deliverables

- Roadmap phase map
- Dependency narrative
- Release planning guidance
- Phase acceptance model
- Future volume inputs

Dependencies

- Volume 00 Enterprise Constitution
- Volume 01 Master Vision
- Release artifact build process

Risks

- Later phases may be interpreted as near-term commitments.
- Dependencies may shift as specifications mature.

- Roadmap breadth may hide priority unless release planning remains disciplined.

Acceptance Criteria

- All phases are named, ordered, and scoped.
- The roadmap can feed Volume 03 blueprints and Volume 06 specifications.
- Phase dependencies and risks are explicit.

Implementation Notes

- Use this overview as the map, not as permission to skip phase-level acceptance.
- Phase order expresses maturity, not necessarily sprint order.
- Future releases may add status fields after implementation begins.

Traceability

- MAL-V00-B014
- MAL-V00-B015
- MAL-V01-B001
- MAL-V01-B010

Version History

Version	Date	Status	Notes
v2 draft	2026-06-29	Draft	Initial roadmap phase definition for Mariam Architecture Library v2.

Book 02-02 - Phase 00 Foundation Constitution

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B002

Purpose

Establish the documentation-first foundation that controls all later implementation work.

Scope

Covers repository authority, constitutional completion, release packaging, traceability rules, and early governance practices.

Strategic Objective

Make the Mariam Architecture Library the operational gate before product code expands.

Systems Included

- Architecture Library authority model
- Volume 00 Enterprise Constitution
- Volume 01 Master Vision
- Release artifact system
- Traceability baseline

Main Deliverables

- Approved constitutional baseline
- Initial strategy baseline
- Release manifest and packaged artifacts
- Document ID convention
- Repository contribution expectations

Dependencies

- No downstream implementation should proceed without Volume 00 and Volume 01 references.
- Build tooling must exist before release artifacts are claimed.
- Governance roles must be clear enough for review.

Risks

- Documentation may become symbolic if not enforced by implementation review.
- Early document IDs may require migration if naming rules change.
- Draft status can be misunderstood as optional authority.

Acceptance Criteria

- Volume 00 and Volume 01 are complete enough to guide roadmap planning.
- Release artifacts are reproducible from repository content.
- Traceability rules are visible to contributors.

Implementation Notes

- Keep this phase implementation-light and documentation-heavy.
- Use the phase to prevent premature coding in the system repository.
- Treat gaps as backlog items rather than hidden assumptions.

Traceability

- MAL-V00-B001
- MAL-V00-B009
- MAL-V00-B014
- MAL-V01-B001

Version History

Version	Date	Status	Notes
v2 draft	2026-06-29	Draft	Initial roadmap phase definition for Mariam Architecture Library v2.

Book 02-03 - Phase 01 Enterprise Core

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B003

Purpose

Define the first executable enterprise platform core for identity, tenancy, roles, and accountable records.

Scope

Covers the minimum enterprise substrate required before advanced AI, marketplace, or automation modules.

Strategic Objective

Create a stable core that can host governed workflows without relying on ad hoc permissions or records.

Systems Included

- Identity and access core
- Tenant and organization model
- Role and permission model
- Audit event foundation
- Core entity registry

Main Deliverables

- Enterprise core blueprint
- Core data model specification
- Permission matrix
- Audit event catalog
- Initial admin workflow specification

Dependencies

- Foundation constitution and enterprise objectives.
- Canonical dictionary for core enterprise terms.
- Security principles for least privilege and auditability.

Risks

- Overbuilding enterprise abstractions before workflows are validated.
- Under-scoping audit needs and forcing rewrites later.
- Confusing user identity with organization membership.

Acceptance Criteria

- Core entities have owners and lifecycle states.
- Protected actions have role and audit rules.
- Future modules can reuse identity and tenant primitives.

Implementation Notes

- Favor simple primitives that can support multiple domains.
- Keep access control explicit in specifications.
- Do not bind the core to a single deployment model yet.

Book 02-04 - Phase 02 Enterprise Organization

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B004

Purpose

Model how organizations structure teams, units, responsibilities, and operating rhythms inside Mariam.

Scope

Covers teams, departments, reporting context, ownership, handoffs, operating cadences, and organization memory.

Strategic Objective

Turn enterprise structure into a usable system layer for accountability and coordination.

Systems Included

- Organization graph
- Team and department registry
- Ownership model
- Handoff rules
- Operating cadence templates

Main Deliverables

- Organization model specification
- Team setup workflows
- Ownership assignment rules
- Handoff record format
- Operating rhythm templates

Dependencies

- Enterprise core identity, role, and tenant primitives.
- Remote work strategy and governance principles.
- Canonical definitions for team, unit, owner, and accountable party.

Risks

- Organization models can become too rigid for real companies.
- Handoffs can create bureaucratic overhead if not ergonomic.
- Ownership data may become stale without maintenance flows.

Acceptance Criteria

- Teams and owners can be represented without custom code per organization.
- Handoffs preserve accountability and context.
- Organization updates are auditable.

Implementation Notes

- Support lightweight setup before complex hierarchy.
- Allow matrix and project-based structures.
- Design organization data to improve workflow routing.

Traceability

Book 02-05 - Phase 03 AI Society

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B005

Purpose

Define the first governed society of AI agents and assistants within Mariam.

Scope

Covers agent roles, boundaries, collaboration contracts, supervision, evaluation, and escalation.

Strategic Objective

Create a controlled multi-agent layer that supports enterprise work without hidden autonomous authority.

Systems Included

- Agent registry
- Agent role definitions
- Prompt and context governance
- Evaluation harness
- Escalation workflows

Main Deliverables

- AI society architecture
- Agent contract template
- Prompt governance rules
- Evaluation scenarios
- Human review checkpoints

Dependencies

- Enterprise core permissions and audit events.
- AI principles and swarm principles.
- Knowledge strategy for context provenance.

Risks

- Agents may appear more authoritative than their actual evaluation supports.
- Prompt drift may weaken repeatability.
- Escalation paths may be skipped if UX is too slow.

Acceptance Criteria

- Every agent has a bounded role and output contract.
- High-impact outputs are reviewable.
- Agent actions are traceable to context and user intent.

Implementation Notes

- Start with few high-value agents before adding broad agent catalogs.
- Separate drafting agents from execution agents.
- Keep model provider details outside the agent identity.

Book 02-06 - Phase 04 Knowledge System

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B006

Purpose

Define the knowledge layer that captures, validates, retrieves, and evolves enterprise memory.

Scope

Covers knowledge objects, provenance, approval states, freshness, retrieval, and correction.

Strategic Objective

Make work output reusable and trustworthy across users, teams, agents, and workflows.

Systems Included

- Knowledge object model
- Source and provenance tracking
- Approval and freshness states
- Search and retrieval strategy
- Correction and supersession workflows

Main Deliverables

- Knowledge schema specification
- Knowledge lifecycle policy
- Retrieval acceptance tests
- Provenance metadata rules
- Knowledge governance workflows

Dependencies

- Organization model and core audit events.
- AI society context needs.
- Knowledge strategy and quality principles.

Risks

- Generated text may be mistaken for approved knowledge.
- Poor metadata can reduce trust in retrieval.
- Knowledge decay can mislead agents and users.

Acceptance Criteria

- Knowledge objects include source, owner, state, and freshness metadata.
- Approved knowledge is distinguishable from drafts and generated suggestions.
- Users can correct or supersede knowledge.

Implementation Notes

- Design knowledge as a system of records and references, not a pile of documents.
- Use explicit lifecycle states for critical knowledge.
- Make retrieval explainable enough for review.

Book 02-07 - Phase 05 Capability System

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B007

Purpose

Define reusable capabilities as governed units of work that users, teams, and agents can invoke.

Scope

Covers capability registry, inputs, outputs, permissions, evaluation, and lifecycle.

Strategic Objective

Turn repeated work patterns into controlled platform capabilities rather than one-off automations.

Systems Included

- Capability registry
- Capability contracts
- Input and output schemas
- Permission gates
- Capability evaluation

Main Deliverables

- Capability model specification
- Reusable capability templates
- Lifecycle states
- Capability test checklist
- Dependency map

Dependencies

- Enterprise core permissions.
- Knowledge system schemas.
- Engineering and quality principles.

Risks

- Capabilities may overlap and create confusion.
- Weak contracts can make automation unsafe.
- Capability reuse may hide domain-specific requirements.

Acceptance Criteria

- Each capability has a clear owner, contract, and allowed users.
- Capability outputs are testable.
- Capabilities can be deprecated or versioned.

Implementation Notes

- Start with human-in-the-loop capabilities.
- Use capability contracts to keep agents and workflows aligned.
- Avoid making capabilities depend on hidden context.

Book 02-08 - Phase 06 DNA Operating System

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B008

Purpose

Define the Mariam DNA layer as operational memory for users, teams, organizations, and domains.

Scope

Covers memory scopes, preferences, patterns, consent, provenance, correction, and adaptation.

Strategic Objective

Use DNA to improve fit and continuity while preserving user control and governance.

Systems Included

- Personal DNA
- Team DNA
- Organization DNA
- Domain DNA
- DNA governance and correction
- DNA-driven recommendations

Main Deliverables

- DNA schema and scope model
- Consent and correction flows
- DNA update policy
- Personalization rules
- DNA risk controls

Dependencies

- Knowledge system provenance.
- AI society recommendation behavior.
- DNA principles and strategy.

Risks

- Inferred DNA may become inaccurate or invasive.
- Personalization may conflict with policy.
- Users may lose trust if memory changes are invisible.

Acceptance Criteria

- DNA entries have scope, source, confidence, and correction path.
- Users can inspect meaningful DNA-driven behavior.
- Security and policy override personalization.

Implementation Notes

- Treat DNA as governed memory, not uncontrolled profile accumulation.
- Separate inferred signals from confirmed facts.
- Make DNA useful before making it broad.

Book 02-09 - Phase 07 Runtime Ecosystem

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B009

Purpose

Define the runtime layer that executes capabilities, workflows, agents, and integrations reliably.

Scope

Covers job execution, eventing, scheduling, queues, state transitions, retries, and observability.

Strategic Objective

Create a dependable execution environment for governed enterprise automation.

Systems Included

- Runtime job model
- Event bus pattern
- Scheduling service
- Retry and recovery policies
- Runtime observability

Main Deliverables

- Runtime architecture blueprint
- Execution state machine
- Event catalog
- Failure handling policy
- Operational dashboards

Dependencies

- Enterprise core audit events.
- Capability system contracts.
- Infrastructure planning.

Risks

- Runtime complexity can outpace product needs.
- Poor observability can hide failed automation.
- Retries can cause duplicate side effects.

Acceptance Criteria

- Runtime jobs have states, owners, and audit trails.
- Failures are observable and recoverable.
- Execution semantics are documented before broad automation.

Implementation Notes

- Design idempotency expectations early.
- Separate runtime state from business approval state.
- Use observability as a first-class deliverable.

Book 02-10 - Phase 08 Model Ecosystem

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B010

Purpose

Define how Mariam manages model providers, model selection, evaluation, and fallback.

Scope

Covers provider abstraction, model registry, routing, evaluation, cost controls, safety, and portability.

Strategic Objective

Keep AI capabilities model-independent while preserving quality and accountability.

Systems Included

- Model registry
- Provider adapter rules
- Routing policy
- Evaluation benchmark sets
- Cost and safety controls

Main Deliverables

- Model ecosystem specification
- Provider abstraction contract
- Evaluation scorecard
- Fallback policy
- Model change review process

Dependencies

- AI society contracts.
- Runtime execution model.
- AI principles and security principles.

Risks

- Provider-specific behavior may leak into product contracts.
- Cost optimization may weaken quality.
- Model updates can silently change outputs.

Acceptance Criteria

- Model changes are reviewable and testable.
- AI capabilities can declare model requirements without hardcoding providers.
- Fallback behavior is documented.

Implementation Notes

- Keep model identity separate from agent identity.
- Track evaluation evidence for important model decisions.
- Design for multiple providers from the start.

Book 02-11 - Phase 09 Workflow System

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B011

Purpose

Define governed workflows that coordinate users, agents, capabilities, records, and approvals.

Scope

Covers workflow definitions, states, triggers, assignments, approvals, exceptions, and reporting.

Strategic Objective

Make repeatable work visible, measurable, and continuously improvable.

Systems Included

- Workflow definition model
- State transition rules
- Assignment and approval engine
- Exception handling
- Workflow analytics

Main Deliverables

- Workflow specification format
- State machine templates
- Approval policy mapping
- Workflow test scenarios
- Operational reporting views

Dependencies

- Enterprise organization model.
- Runtime ecosystem.
- Capability contracts and knowledge objects.

Risks

- Workflow definitions can become too hard for users to maintain.
- Over-automation may bypass meaningful review.
- Unclear state transitions can break reporting.

Acceptance Criteria

- Workflows have explicit states and transitions.
- Approvals and exceptions are auditable.
- Workflow outcomes can be measured.

Implementation Notes

- Start with core workflow patterns before a full workflow builder.
- Expose state clearly to users.
- Use workflow telemetry to improve design.

Book 02-12 - Phase 10 Swarm Intelligence

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B012

Purpose

Define advanced collaboration among multiple agents, capabilities, and human reviewers.

Scope

Covers task decomposition, agent coordination, consensus, critique, conflict resolution, and escalation.

Strategic Objective

Enable intelligent parallel work while keeping decisions inspectable and governed.

Systems Included

- Swarm orchestration
- Task decomposition
- Consensus and critique loops
- Conflict resolution
- Human escalation

Main Deliverables

- Swarm architecture specification
- Coordination protocol
- Conflict event model
- Review workflow
- Swarm evaluation tests

Dependencies

- AI society.
- Workflow system.
- Runtime ecosystem and model ecosystem.

Risks

- Swarm outputs may be hard to explain.
- Parallel agents can multiply cost and failure modes.
- Consensus can mask shared bad assumptions.

Acceptance Criteria

- Swarm decisions produce traceable intermediate outputs.
- Conflicts are surfaced, not hidden.
- Human review remains available for high-impact outcomes.

Implementation Notes

- Use swarm behavior for complex tasks, not simple operations.
- Record why agents agree or disagree.
- Keep orchestration deterministic where possible.

Book 02-13 - Phase 11 Opportunity Intelligence

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B013

Purpose

Define how Mariam identifies, ranks, and explains opportunities for users and organizations.

Scope

Covers opportunity signals, scoring, recommendations, market context, fit analysis, and action paths.

Strategic Objective

Turn scattered signals into governed, explainable opportunity pipelines.

Systems Included

- Opportunity signal model
- Scoring and fit engine
- Recommendation explanation
- Action workflow handoff
- Opportunity knowledge base

Main Deliverables

- Opportunity intelligence specification
- Signal source catalog
- Scoring criteria
- Recommendation UI requirements
- Feedback loop

Dependencies

- Knowledge system.
- DNA operating system.
- Marketplace and freelance strategies.

Risks

- Bad scoring can mislead users.
- Signal sources may have licensing or reliability constraints.
- Recommendations can feel opaque without explanations.

Acceptance Criteria

- Recommendations include rationale and source references.
- Users can accept, reject, or correct opportunity signals.
- Scoring criteria are testable.

Implementation Notes

- Separate signal collection from decision support.
- Make opportunity ranking adjustable by user or organization context.
- Preserve privacy boundaries when using DNA.

Book 02-14 - Phase 12 Freelance Automation

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B014

Purpose

Define automation support for freelancers across discovery, proposals, delivery, communication, and portfolio growth.

Scope

Covers freelancer profiles, client opportunities, proposal workflows, delivery tracking, communication drafts, and evidence capture.

Strategic Objective

Help independent workers operate with enterprise-grade structure without losing personal control.

Systems Included

- Freelancer profile system
- Proposal generation and review
- Client communication support
- Delivery workflow templates
- Portfolio memory

Main Deliverables

- Freelance workflow specifications
- Proposal quality checklist
- Client handoff templates
- Delivery evidence model
- Freelancer dashboard requirements

Dependencies

- Opportunity intelligence.
- DNA operating system.
- Workflow system and knowledge system.

Risks

- Automation may damage authenticity if overused.
- Client communications require careful review.
- Freelance workflows vary widely by market and skill.

Acceptance Criteria

- Freelancer-facing outputs remain reviewable before sending.
- Delivery commitments are tracked.
- Portfolio memory links to verified work evidence.

Implementation Notes

- Position AI as leverage for the freelancer, not a replacement voice.
- Support configurable tone and proposal strategy.
- Keep client data protected and scoped.

Traceability

- MAL-V01-B005
- MAL-V00-B006

Book 02-15 - Phase 13 Remote Work Automation

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B015

Purpose

Define automation for distributed teams, async coordination, handoffs, updates, and accountability.

Scope

Covers async summaries, decision records, blockers, handoffs, meeting-to-workflow conversion, and operating rhythm support.

Strategic Objective

Make remote work clearer and less dependent on meetings or scattered chat history.

Systems Included

- Async update engine
- Decision record automation
- Blocker tracking
- Handoff workflows
- Remote operating dashboards

Main Deliverables

- Remote work automation specification
- Async summary templates
- Decision record schema
- Blocker lifecycle
- Team rhythm playbooks

Dependencies

- Enterprise organization model.
- Knowledge system.
- Remote work strategy.

Risks

- Automation can become surveillance if framed poorly.
- Summaries may omit important nuance.
- Async workflows may clash with existing team habits.

Acceptance Criteria

- Remote workflows preserve decisions, blockers, and owners.
- Users can review generated summaries.
- Operating dashboards focus on work state, not personal monitoring.

Implementation Notes

- Design for trust and clarity.
- Let teams tune cadence and notification intensity.
- Use knowledge provenance for summaries.

Book 02-16 - Phase 14 Enterprise Governance

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B016

Purpose

Define advanced governance controls for policy, approvals, exceptions, compliance evidence, and release authority.

Scope

Covers policy engine, approval chains, exception lifecycle, compliance reporting, and governance analytics.

Strategic Objective

Make governance enforceable and visible across enterprise workflows.

Systems Included

- Policy registry
- Approval chain engine
- Exception management
- Compliance evidence records
- Governance reporting

Main Deliverables

- Governance specification
- Policy object model
- Exception workflow
- Compliance evidence checklist
- Governance dashboard requirements

Dependencies

- Enterprise core.
- Workflow system.
- Security and governance principles.

Risks

- Governance can slow teams if too rigid.
- Policy exceptions can become permanent without review.
- Compliance evidence may expose sensitive data.

Acceptance Criteria

- Policies map to workflows and protected actions.
- Exceptions have owners, reasons, and review dates.
- Governance reports avoid leaking restricted data.

Implementation Notes

- Make policy configuration understandable to administrators.
- Separate governance evidence from sensitive payloads.
- Use expiration dates for exceptions.

Book 02-17 - Phase 15 Enterprise Services

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B017

Purpose

Define service offerings and internal service patterns that organizations can run through Mariam.

Scope

Covers service catalogs, intake, SLAs, fulfillment workflows, service ownership, and performance reporting.

Strategic Objective

Turn enterprise work into accountable services with clear intake and delivery outcomes.

Systems Included

- Service catalog
- Intake workflows
- SLA and priority model
- Fulfillment tracking
- Service analytics

Main Deliverables

- Enterprise services blueprint
- Service definition template
- Intake form standards
- SLA policy
- Service reporting views

Dependencies

- Workflow system.
- Enterprise governance.
- Organization model.

Risks

- Services may duplicate existing workflow concepts.
- SLA metrics may be misleading without context.
- Service catalogs can become stale.

Acceptance Criteria

- Services have owners, intake rules, expected outcomes, and reporting.
- Fulfillment status is visible.
- Service definitions can be versioned.

Implementation Notes

- Use services for repeatable enterprise offerings.
- Keep intake ergonomic.
- Connect service performance to workflow telemetry.

Book 02-18 - Phase 16 Infrastructure

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B018

Purpose

Define infrastructure direction for deployment, environments, observability, security, and operational resilience.

Scope

Covers environments, hosting assumptions, secrets, logs, monitoring, backups, recovery, and release operations.

Strategic Objective

Create an operating foundation that can support enterprise reliability and future scale.

Systems Included

- Environment model
- Deployment pipeline
- Secrets management
- Monitoring and logging
- Backup and recovery
- Operational runbooks

Main Deliverables

- Infrastructure blueprint
- Environment matrix
- Deployment checklist
- Observability standards
- Recovery objectives

Dependencies

- Runtime ecosystem.
- Security principles.
- Operations guide volume.

Risks

- Infrastructure choices may prematurely constrain architecture.
- Weak secrets management can compromise the system.
- Observability gaps can delay incident response.

Acceptance Criteria

- Environments and release flow are documented.
- Secrets are never stored in code or docs.
- Operational signals support incident diagnosis.

Implementation Notes

- Prefer portable architecture until scale requirements are proven.
- Define runbooks with real operator needs.
- Track infrastructure decisions as architecture records.

Book 02-19 - Phase 17 Experience Layer

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B019

Purpose

Define the user experience layer for enterprise users, freelancers, operators, and administrators.

Scope

Covers navigation, work surfaces, dashboards, review experiences, notifications, and explainability UX.

Strategic Objective

Make complex AI and enterprise workflows usable, legible, and trustworthy.

Systems Included

- Application shell
- Role-based workspaces
- Review and approval surfaces
- Dashboards
- Notification model
- Explainability UI patterns

Main Deliverables

- Experience architecture
- Navigation model
- Dashboard requirements
- Review UX specification
- Notification rules

Dependencies

- Enterprise core roles.
- Workflow system.
- AI society and knowledge system.

Risks

- Complexity may overwhelm users.
- Dashboards may become decorative instead of operational.
- AI explanations may be too vague.

Acceptance Criteria

- Users can find their work, decisions, reviews, and system state.
- Critical AI outputs include review context.
- Notifications are actionable and configurable.

Implementation Notes

- Design for repeated operational use, not landing-page aesthetics.
- Match experience density to user roles.
- Use explainability as part of workflow, not a separate report.

Book 02-20 - Phase 18 Marketplace

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B020

Purpose

Define marketplace capabilities for matching people, services, opportunities, and trusted delivery evidence.

Scope

Covers marketplace profiles, listings, matching, reputation, transactions, dispute signals, and marketplace governance.

Strategic Objective

Create a trusted ecosystem layer that compounds platform knowledge and delivery evidence.

Systems Included

- Marketplace profiles
- Listing and offer model
- Matching engine
- Reputation evidence
- Transaction support
- Marketplace governance

Main Deliverables

- Marketplace strategy specification
- Profile and listing schemas
- Matching criteria
- Reputation policy
- Governance and dispute workflow

Dependencies

- Freelance automation.
- Opportunity intelligence.
- Enterprise governance and knowledge system.

Risks

- Marketplace trust can collapse if reputation is weak.
- Transactions introduce regulatory and support complexity.

- Matching may encode bias without evaluation.

Acceptance Criteria

- Listings and profiles are structured and reviewable.
- Reputation uses evidence rather than opaque scores alone.
- Marketplace actions are governed and auditable.

Implementation Notes

- Stage marketplace features gradually.
- Start with discovery and matching before complex transactions.
- Keep trust and dispute workflows visible.

Book 02-21 - Phase 19 Evolution System

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B021

Purpose

Define how Mariam learns from usage, feedback, releases, incidents, and strategic shifts.

Scope

Covers product telemetry, feedback loops, deprecation, migration, roadmap revision, and documentation evolution.

Strategic Objective

Make continuous improvement a governed system rather than informal reaction.

Systems Included

- Feedback intake
- Telemetry interpretation
- Deprecation workflow
- Migration planning
- Roadmap revision process
- Documentation update loop

Main Deliverables

- Evolution system blueprint
- Feedback taxonomy
- Deprecation policy
- Migration checklist
- Roadmap review cadence

Dependencies

- Workflow analytics.
- Governance system.
- Evolution principles.

Risks

- Telemetry may be over-collected or misinterpreted.
- Deprecation may surprise users.
- Feedback may not reach documentation.

Acceptance Criteria

- Feedback can be converted into roadmap or specification changes.
- Breaking changes include migration guidance.
- Documentation updates are part of release readiness.

Implementation Notes

- Connect product evidence to architecture review.
- Use explicit lifecycle states for concepts and features.
- Protect user privacy in telemetry design.

Book 02-22 - Phase 20 Autonomous Enterprise

Version: v2 draft

Status: Draft

Document ID: MAL-V02-B022

Purpose

Define the long-horizon target where Mariam can coordinate substantial enterprise work with bounded autonomy.

Scope

Covers autonomous planning, execution supervision, enterprise simulation, self-improvement loops, risk controls, and executive oversight.

Strategic Objective

Reach high-leverage autonomy only after governance, knowledge, runtime, and evaluation foundations are mature.

Systems Included

- Autonomous planning
- Supervised execution
- Enterprise simulation
- Risk scoring
- Executive oversight
- Self-improvement controls

Main Deliverables

- Autonomous enterprise concept blueprint
- Autonomy maturity model
- Risk and escalation framework
- Simulation requirements
- Executive control surfaces

Dependencies

- All earlier roadmap phases.
- Governance, security, AI, swarm, and evolution principles.
- Mature evaluation and runtime systems.

Risks

- Premature autonomy can create unacceptable business and security risk.
- Complex decisions may become impossible to explain.

- Self-improvement loops can amplify errors without controls.

Acceptance Criteria

- Autonomous behavior remains bounded, observable, and reversible.
- High-impact decisions require human-defined authority.
- Simulation and evaluation precede production autonomy.

Implementation Notes

- Treat this as a long-term maturity phase, not an early product promise.
- Use autonomy levels and explicit permission boundaries.
- Require evidence before expanding autonomous scope.
